Upgrade to the latest version and save!

FLASH SALE

Medisoft® powered by eMDs is a proven, trusted, and affordable practice management solution designed to simplify the way you run your practice.

What's New in Medisoft V22?

Medisoft is already one of the most mature practice management systems on the market. It gets better each year as eMDs adds new layers of functionality and improved usability. Here are just a few notable additions:

Accounts Receivable Tracker

The new AR Tracker tool allows your staff to drill down into their Accounts Receivable and work outstanding balances from within Medisoft. With advanced filtering capabilities and the ability to create and assign tasks, staff can create the exact workflows they need to follow up on balances and bring more of your revenue back in the door.

Enhanced Eligibility Checking

With the shift in payment responsibility to patients, it's more important than ever to get up to date eligibility benefits information at or before the time of service. eMDs has invested in major upgrades to the eligibility checking system including better automation with more EDI partners.

Payment Processing Improvements

Batch posting of remittances has been upgraded to allow you to partial post. You can print an EOB for a single claim. New filtering options make it easier to find claims that are ready to post and make you more efficient.

(over for more benefits)

Claim Status Checking

Now you can initiate a true claim status check through your clearinghouse and receive an electronic response that updates the status of claims making it even easier to know if you're going to be paid.

Expanded Mobile Functionality

Medisoft Mobile now includes a brand new user interface, new levels of customization for your superbills and patient questionnaires, and support for Apple iPhone and iPad devices.

With the Medisoft Flash Sale, eMDs is offering deep discounts on your upgrade. If you are upgrading from Medisoft V20 or older, you will receive 50% off MSRP when you upgrade to Medisoft V22 in the month of October.

Simply Better EHR, Practice Management, Revenue Cycle, and Credentialing Services.

Simply Better EHR, Practice Management, Revenue Cycle, and Credentialing Services.

Online Appointment Scheduling

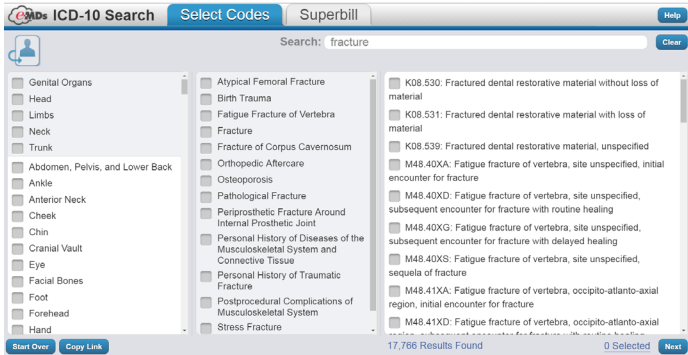

As the world continues to move online, patients demand the same from their practices. With the latest version of Medisoft, your practice can now allow patients to schedule and request appointments right from your website. And as your patients register, they can also complete demographic form entry speeding up the patient intake process once the patient arrives.

Integrated Appointment Reminders

Medisoft’s partnership with AutoRemind offers practices the ability to send appointment reminders through phone calls, texts, or secure emails. As patients confirm their appointment, Medisoft will update the status in the system. AutoRemind can also be used for recalls, birthday, and other patient engagement and marketing purposes.

ICD-10 Search Tool

ICD-10 searches can be complex. You need a tool that can quickly and easily select the appropriate codes without disrupting your natural workflow. The Medisoft ICD-10 search is the best available and helps you find the right codes fast and can even save you from needing to license other coding tools.

In 2018, a regulatory requirement to issue new Medicare identifiers to patients will begin. In addition to saving you money, eMDs is guaranteeing that your new Medisoft system will support the transition to the Medicare Beneficiary Identifier (MBI) to ensure support for your practice with Medicare claims, claim status, eligibility status, and payment. If you upgrade to version 22 before the end of the year, MBI updates will be provided to you free-of-charge when they become available on Medisoft. Guaranteed.
